aFe Control - Suspension Logic Electronic Shock Delete Module Ford F-150 Raptor 19-20 V6-3.5L (tt)

Product Number:
436-30T001-A

Install Time:
10 Min.

Installation:

1. Locate your factory electronic shock control module. This device is mounted under the dash on the left side of the driver's side footwell.
   (shock control harness/connector is on the left)

2. Disconnect the factory electronic shock control module (black connector on the left).

3. Plug in the factory harness to the aFe CONTROL Suspension Logic Electronic Shock Delete Module.

4. Using the included double-sided tape, find a suitable mounting location to secure the aFe CONTROL Electronic Shock Delete Module under the dash.
(Alternatively, use the included zip ties to secure the module out of the way of the foot controls)

5. To test the functionality of the Electronic Shock Delete Module, on the bottom right of the steering wheel, cycle through the Terrain Modes of the vehicle by using the "Mode +" and "Mode –" buttons.

(Note: If no suspension indicator lights appear, then the module is operating as intended. If a "Service Suspension" warning appears, please verify that the electrical connection on the module and try again)
